Figure 1a. Relative survival of patients with Non-Hodgkin lymphoma NOS by period of diagnosis. Included in the evaluation are 2,072 cases diagnosed between 1988 and 2020.

The survival results of the SEER program (Surveillance, Epidemiology, and End Results) of the American National Cancer Institute (NCI) are summarized as the period of diagnosis from 2000 to 2018, and are represented by colored diamonds in order to facilitate comparisons between MCR and SEER.

The presented survival curves are derived from clinical records with valid follow-up informations, which means that death certificate cases (DCO) cases are omitted from the analysis. With this one restriction, the MCR has provided population-based statistics since 1998, collecting data on all cancer cases in the region of southern Bavaria. Historical data of previous time periods can be heavily selected, therefore, univariate survival comparisons of the presented time periods must be carefully considered. Nonetheless, all calculable survival curves are depicted to facilitate the comparison of long time follow-up analyses of relative survival between particular cancers.

Years	Period of diagnosis					
	1988-1997 n=748		1998-2006 n=614		2007+ n=710	
	obs. %	rel. %	obs. %	rel. %	obs. %	rel. %

15	28.3	39.6	30.9	41.8
Median	5.2		6.5	

Table 2b. Observed (obs.) and relative (rel.) survival of patients with Non-Hodgkin lymphoma NOS by sex for period 1998-2020 (N=1,324).

Figure 2c. Conditional relative 2 / 5-year survival of patients with Non-Hodgkin lymphoma NOS by sex. For 1,324 of 1,324 cases diagnosed between 1998 and 2020 valid data could be obtained for this item.

Years	Sex					
	Male			Female		
	n	Cond. surv. % 2 yrs	5 yrs	n	Cond. surv. % 2 yrs	5 yrs
0	704	68.9	57.8	620	69.8	61.2
1	496	87.2	74.7	443	87.1	78.6
2	433	89.3	77.8	389	91.5	81.0
3	393	88.3	80.7	347	93.0	84.0
4	344	91.9	84.0	315	94.2	83.4
5	291	92.7	83.5	284	92.6	82.1
6	248	94.2	82.9	260	93.2	83.3
7	211	96.2	86.2	226	93.7	84.8
8	194	91.5	82.4	205	90.5	82.2
9	172	90.1	81.3	178	93.8	83.6
10	148	96.1	85.2	150	95.8	86.1

Table 2d. Conditional relative 2 / 5-year survival of patients with Non-Hodgkin lymphoma NOS by sex for period 1998-2020 (N=1,324).

Conditional relative survival rates refer to the relative survival probability, in this case for 2 and 5 years after cancer diagnosis, compared to the age- and sex-matched population (=100 %) under the condition of being alive for a certain time period (x-axis in Figure 2a). The results illustrate to what extent the cancer induced mortality of particular subgroups declines in the subsequent years after detection of the malignancy. For instance, according to the presented survival statistics, patients in the subgroup sex="Male", who are alive at least 3 years after cancer diagnosis, the conditional relative 2-year survival rate is 88.3% (n=393).

Figure 3a. Relative survival of patients with Non-Hodgkin lymphoma NOS by age category. Included in the evaluation are 1,324 cases diagnosed between 1998 and 2020.

Years	Age category									
	0-29 yrs n=64		30-39 yrs n=72		40-49 yrs n=111		50-69 yrs n=478		70+ yrs n=599	
	obs. %	rel. %	obs. %	rel. %	obs. %	rel. %	obs. %	rel. %	obs. %	rel. %
0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

15					56.9	60.4	40.0	51.3		
Median							10.6		2.0	

Table 3b. Observed (obs.) and relative (rel.) survival of patients with Non-Hodgkin lymphoma NOS by age category for period 1998-2020 (N=1,324).

Figure 4a. Relative survival of patients with Non-Hodgkin lymphoma NOS by Ann Arbor staging. For 338 of 1,324 cases diagnosed between 1998 and 2020 valid data could be obtained for this item. For a total of 337 cases an evaluable classification was established. The grey line represents the subgroup of 987 patients with missing values regarding Ann Arbor staging (74.5 % of 1,324 patients, the percent values of all other categories are related to n=337).

Ann Arbor staging											
Years	I n=69		II n=64		III n=63		IV n=141		NA n=987

Table 4b. Observed (obs.) and relative (rel.) survival of patients with Non-Hodgkin lymphoma NOS by Ann Arbor staging for period 1998-2020 (N=337).

Figure 5a. Time to first progression of 1,303 patients with Non-Hodgkin lymphoma NOS diagnosed between 1998 and 2020 (in solid cancers M0 only) estimated by cumulative incidence function (CI, solid line) accounting for death as competing risk and by inverse Kaplan-Meier estimate (1-KM, dashed line). The frequency of events may be underestimated due to underreporting.

	Type of progression	
	Any type (CI)	Any type (1-KM)
N	1,303	1,303
Events	724	724
compet.	205	
Years	%	%
0	0.0	0.0
1	36.7	38.0
2	45.4	47.3
3	48.1	50.4
4	50.3	53.0
5	52.8	56.0
6	54.5	58.1
7	55.8	59.8
8	56.4	60.6
9	57.3	61.9
10	57.8	62.6

Table 5b. Time to first progression of patients with Non-Hodgkin lymphoma NOS for period 1998-2020 (N=1,303), also showing the total of progression events (Events) and of deaths as competing risk (compet.).

Figure 5c. Observed post-progression survival of 462 patients with Non-Hodgkin lymphoma NOS diagnosed between 1998 and 2020. These 462 patients with documented progression events during their course of disease represent 35.4 % of the totally 1,305 evaluated cases. Patients with cancer relapse documented via death certificates only were excluded (n=286, 21.9 %).

Medical record documentation often lacks the linguistic severity to distinguish between local relapse, regional lymph node metastasis and distant spread in solid cancers. Frequently, the statement “not specified” is the only information in registries regarding relapse of the disease. The category “Any type” denotes all cases who suffered from at least one relapse during the course of disease (incl. primary M1-status). Although, the real number of relapsed patients is likely to be much higher. The accumulated percentage of patients with local relapse or distant metastasis exceeds the 100 % value because patients are potentially considered in more than one subgroup.

Type of progression	
Any type n=462	
Years	%
0	100.0
1	69.9
2	61.8
3	55.5
4	50.6
5	48.1
6	44.5
7	43.2
8	41.8
9	38.0
10	35.2

Table 5d. Observed post-progression survival of patients with Non-Hodgkin lymphoma NOS for period 1998-2020 (N=462).

Figure 5e. Observed post-progression (any type) survival of 804 patients with Non-Hodgkin lymphoma NOS diagnosed between 1988 and 2020 by period of progression.

Years	Period of progression		
	1988-1997 n=239 %	1998-2006 n=266 %	2007+ n=299 %
0	100.0	100.0	100.0
1	76.2	62.9	77.3

DCO Death certificate only Death certificate provides the only notification to the registry.

NA Not available

NOS Not otherwise specified

OS Overall/Observed survival Overall/Observed survival (Kaplan-Meier estimate)

Date of entry: diagnosis
Event: death from any cause

RS Relative survival Survival compared to “general population”, ratio of observed to expected survival (Ederer II method), reflecting cancer specific survival

AS Assembled survival Assembled chart of observed, expected, relative survival

CS Conditional survival Survival probability under the condition of surviving a given period of time

TTP Time to progression Time to first progression / relapse
Date of entry: diagnosis
Event: (progression / relapse): first local-, lymph node recurrence, distant metastasis or unspecified progression

1-KM 1 minus Kaplan-Meier estimator (“inverse” Kaplan-Meier estimator)

CI Cumulative incidence
Death as competing risk (according to Kalbfleisch und Prentice)

PPS Post-progression survival Survival since first progression / relapse (Kaplan-Meier estimate)
Date of entry (progression / relapse): first local-, lymph node recurrence, distant metastasis or unspecified progression
Event: death from any cause
